

## **Alliance Airlines Accident Records: Outcomes**

### **Accident 1: Alliance Airlines Flight 764 (Accident ID: 1)**

Outcome: The crew declared an emergency and returned to Brisbane for a successful landing. There were no injuries among the passengers and crew. The investigation revealed that the hydraulic system failure was due to a rupture in one of the hydraulic lines. Maintenance protocols were updated to prevent similar incidents in the future.

### **Accident 2: Alliance Airlines Flight 850 (Accident ID: 2)**

Outcome: The crew executed a safe landing at Perth Airport. The engine was shut down as a precaution, and there were no injuries. The damaged engine was replaced, and the aircraft was returned to service after thorough inspections. Bird strike mitigation measures were reviewed and enhanced at the airport.

### **Accident 3: Alliance Airlines Flight 982 (Accident ID: 3)**

Outcome: The aircraft landed safely, and the injured passengers received medical attention upon landing. The turbulence incident highlighted the importance of seatbelt use during all phases of flight. The airline conducted a review of turbulence response procedures and passenger safety briefings.
